Lofty

The "Real Estate AI-Native PM" Track

The Vision

Lofty is an AI-powered real estate platform that helps agents and teams manage their entire business —from lead generation to CRM, marketing automation and transaction management. We serve thousands of real estate professionals across North America.

Our platform includes:

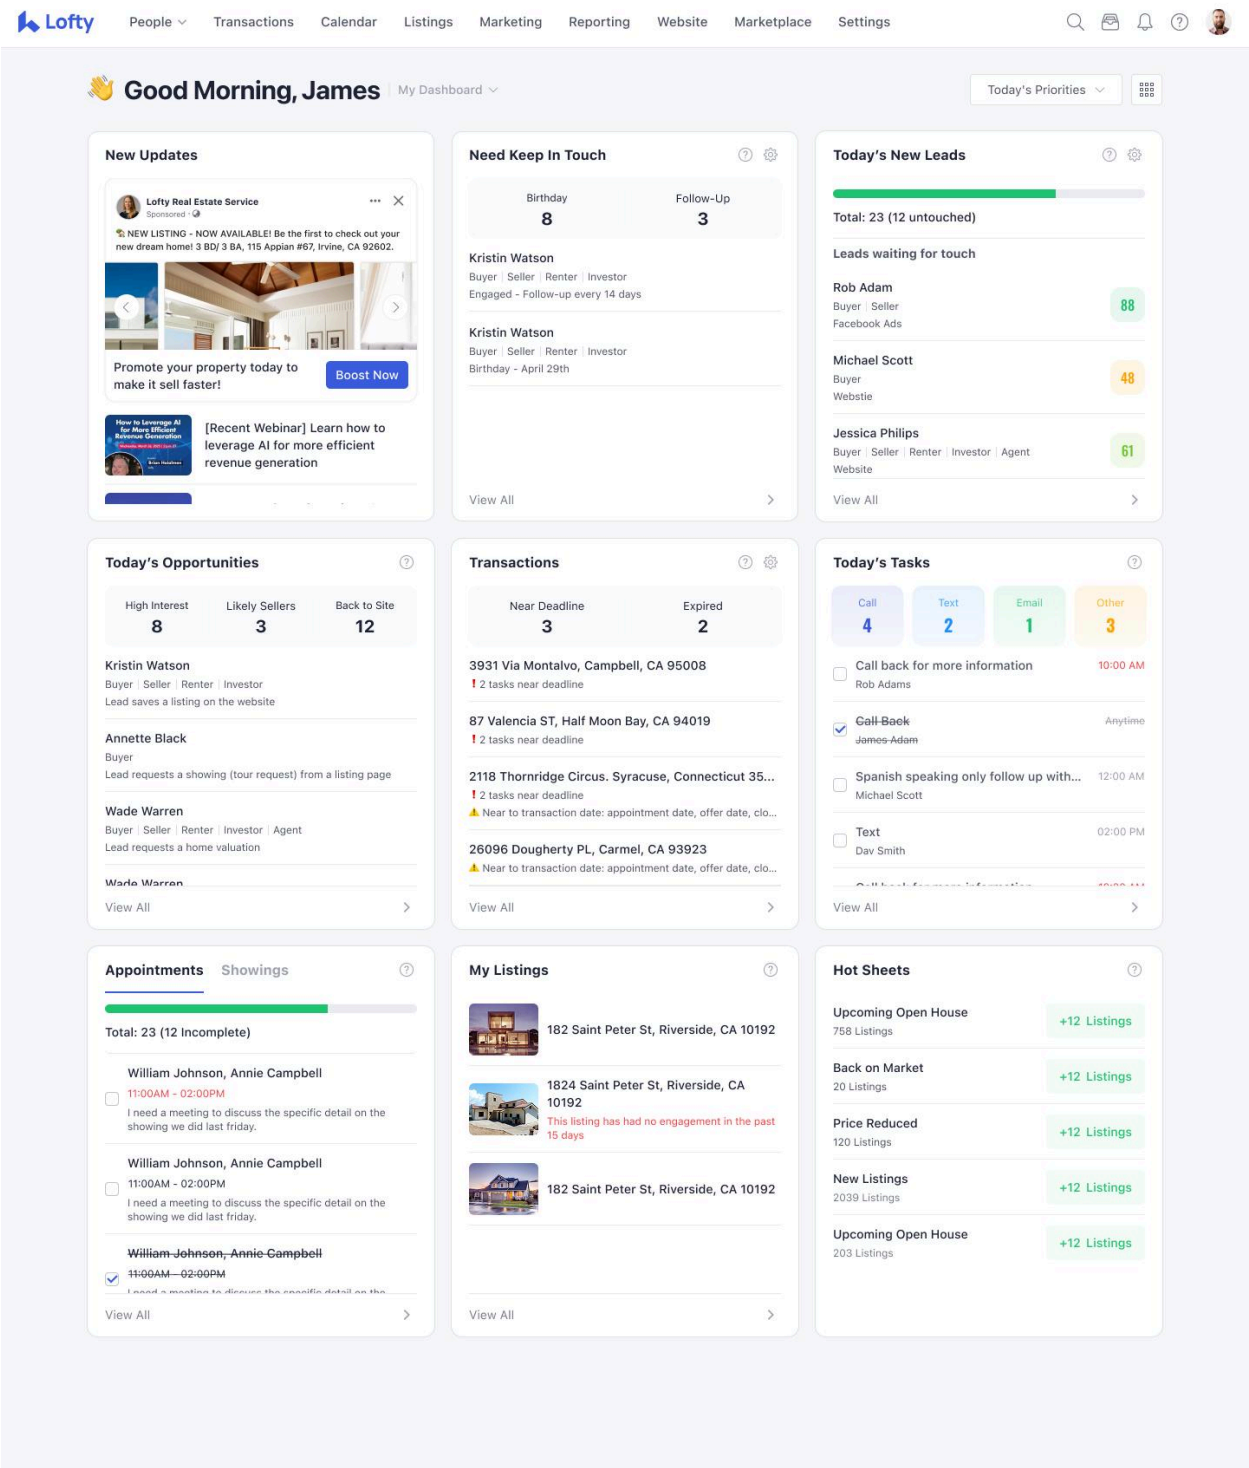
- CRM & Contact Management — Track leads, clients, and relationships
- AI-Powered Lead Nurturing — Automated follow-ups, smart recommendations
- Marketing Suite — Email campaigns, social media, listing promotion
- Transaction Management — Deal tracking, document management
- Team Collaboration — Lead routing, performance analytics

The AI Evolution at Lofty: Agentic AI Operating System (AOS)

Lofty has launched the first Agentic AI Operating System built for real estate. Unlike traditional AI tools that provide isolated features, Lofty AOS deploys specialized AI agents that understand context, take autonomous action, and complete workflows end-to-end. To learn more about what Lofty AI can do today, visit lofty.com/aos

The Lofty Platform Today

Below is the first page users see after logging in. It gives you an overview of Lofty's interface, including the full navigation and the main content modules:



What You're Looking At:

- New Updates — Product announcements, feature releases, and advertising opportunities for your listings. Also links to the latest Lofty Help Center articles.
- Need Keep In Touch — Contacts that need your attention based on relationship milestones. This includes upcoming birthdays (next 2 weeks or month), scheduled

follow-up reminders, and leads you haven't contacted in a while. Helps agents maintain personal relationships at scale.

- Today's New Leads — Newly acquired leads from today or this week, captured from IDX websites, ads, landing pages, or manual entry. Each lead comes with a Lead Score (0– 100) based on home price, time frame, contact validity, communication history, and web activity. Agents can set up automated follow-ups directly from this card.
- Today's Opportunities — High-priority leads flagged by Lofty's behavioral analysis. There are four types: High Interest (lead score >70), Back To Site (a lead who hasn't visited in 5+ days returns), Sell (leads requesting a home evaluation), and Back On Market (relevant listings become available again). These are time-sensitive signals that help agents act quickly.
- Transactions — Active real estate deals being tracked through their lifecycle from offer to closing. Shows upcoming deadlines (inspection dates, contingency expirations, closing dates) and required tasks. Helps agents manage the paperwork and timeline of each deal in their pipeline.
- Today's Tasks — A to-do list of actions due today or this week: phone calls, text messages, emails, and custom tasks. Tasks can be created manually or generated automatically by Smart Plans (automated lead nurturing workflows that combine drip campaigns with scheduled agent actions).
- Appointments & Showings — Scheduled property tours and client meetings. Showing requests come in real-time when a lead books a tour from the agent's IDX website. Agents can accept, reschedule, or reassign showings, and all appointments sync to their calendar.
- My Listings — Properties the agent is currently marketing for sale. Agents can view listing details, share listings with leads, generate showing links, and see which leads from their database have viewed or saved a specific property.
- Hot Sheets — Saved MLS search filters that track market activity in real time. Agents create Hot Sheets by setting criteria (location, price range, beds/baths, etc.) and Lofty automatically surfaces matching new listings. Also includes a "Buyer Matching" feature that pairs incoming listings with leads whose saved searches match the property criteria.

The Problem

We've built powerful AI capabilities, but users still need to navigate the platform themselves, scan through multiple modules, and mentally prioritize: "What should I do first?"

AI capabilities exist but aren't front-and-center in the daily experience. The platform doesn't proactively guide users toward their highest-impact actions.

The question: How should users FIRST EXPERIENCE Lofty as an AI-native platform?

The Challenge

Reimagine how users first experience Lofty as an AI-native platform — and build a working prototype to show us your vision. Choose an entry point, design and build a clickable prototype or coded demo, and present it to our team.

We want to see your product thinking, design craft, and ability to ship a tangible solution. We're not prescribing what to build — you choose the most impactful "first experience" based on your analysis. Pick ONE of the following entry points (or propose your own):

Dashboard Redesign	Transform the daily landing page from widgets to an AI-driven experience
AI Command Center	A new conversational interface where users tell AI what they want to accomplish
Morning Briefing	AI proactively tells users what matters today and what actions to take
Onboarding Flow	How new users are introduced to AI capabilities and build trust
Something Else	Surprise us — if you see a better entry point, go for it

Questions to Consider

As you design and build your prototype, keep these questions in mind:

- Why this entry point? What user problem are you solving?
- Who is the target user? What are their goals, pain points, and concerns?
- What makes your design "AI-native" rather than just adding AI features on top?
- How does your prototype build trust with users who may be skeptical of AI?
- What trade-offs did you make, and what would you build next with more time?
- If this shipped, how would you measure success?

Submission Deliverables

1. A Demo of Your Vision

   Show us your final idea in a tangible form. This could be:

   a. An interactive prototype (Figma, Framer, or similar)
   b. A coded demo (React, HTML, or any framework)
   c. A video walkthrough demonstrating the experience

   Use realistic content (real estate data, agent names, property details) and demonstrate how AI changes the user experience.

2. Design Rationale

   Along with your demo, explain your design thinking:

   a. Why you chose this entry point and what user problem it solves
   b. Key design decisions and trade-offs you made
   c. What you'd build next with more time

   This can be included as annotations in your prototype, a written summary, or a narrated video — whatever best communicates your reasoning.

3. Note:
    a. We encourage you to use AI tools (Claude, ChatGPT, Cursor, v0, Galileo, etc.) throughout this exercise. AI is a core part of how we work at Lofty. Your ability to leverage AI effectively to move faster and produce better work is something we value highly.
    b. In your submission, briefly share which AI tools you used and how they helped you along the way.

Requirements

- Must submit an interactive prototype (Figma/Framer), coded demo (React/HTML), or video walkthrough using realistic real estate data.
- Must submit a Design & GTM Rationale explaining why you chose this entry point and how you would measure its success.
- Must explicitly disclose which AI tools (Cursor, ChatGPT, v0, Claude) you used to move faster during this hackathon.

INTERNAL USE ONLY

The Prize

- 1st Place: Paid Product Management Residency/Internship (On-Site in Phoenix) working directly with Lofty's PMs and revenue leaders. ($25/hr)

  AI-Native Product Management Intern

  Phoenix, AZ (On-Site)

  This is not a traditional internship. This is a Product Management residency for individuals who want to become AI-native PMs operating at the highest level. You will work directly with Product Managers and revenue leaders to build and scale AI-powered products across Lofty's real estate platform. From day one, you will operate like a junior PM owning problems, shipping solutions, and using AI to dramatically increase your speed and output.

  What You'll Do

  - Own real product problems across acquisition, activation, and monetization—not shadow, but build
  - Use AI daily to generate insights, write product specs, analyze data, and prototype solutions
  - Run experiments to improve conversion, engagement, and revenue across the funnel
  - Partner with sales, marketing, and engineering to ship features and measure impact
  - Turn ambiguous problems into clear product decisions with speed and rigor

  What We're Looking For

  - Extremely sharp, high-agency individuals who want to become top 1% Product Managers
  - AI-native mindset: you already use AI tools daily to think, build, and execute faster
  - Strong analytical thinking and comfort working with data
  - Clear communication and ability to break down complex problems
  - Hunger to build, ship, and learn at a rapid pace

  What You'll Gain

  - Direct mentorship from experienced Product Managers and GTM leaders
  - Real product ownership—not busy work
  - Exposure to SaaS growth, revenue systems, and AI-native product development
  - A clear path to a full-time Product Manager role for top performers
- 2nd Place: $100 Visa gift card

Workshop Team

- Baylee Rhoades, Product Enablement Engineer – conducing the Lofty Demo on Saturday, 4/18 @12:30-1pm

Judges

- Henry Li, CTO – participating in the judging on Sunday, 4/19

- Joe Chen, CEO – participating in the judging on Sunday, 4/19

Judging Criteria

- Problem Understanding & Rationale (30%) — Why this entry point? Does it build trust with skeptical agents?
- Execution & Design Craft (35%) — Quality of the interactive prototype or coded demo.
- Innovation & "AI-Native" Approach (20%) — Does this fundamentally change the workflow, or is it just a feature layered on top?
- Presentation & Tool Leverage (15%) — How effectively you leveraged AI coding tools to ship a tangible solution under the deadline.
